MARYLAND STATISTICAL ABSTRACT

1975

ACKNOWLEDGEMENTS

The 1975 edition of the Maryland Statistical Abstract was prepared by the Division of Research of the Department, PADRAIC P. FRUCHT, Director of Research. NEIL M. SHPRITZ, Chief of Business Research, was responsible for general supervision and compilation, ably assisted by IRENE TASHLICK. LOUIS HACKERMAN AND BRIAN STEVENS, summer student interns, who worked long and hard hours on this project, provided valuable service in collecting and organizing data. PATRICIA FRAZIER had primary responsibility for clerical operations.

We thank the many contributors to this volume. Notes below each table credit its sources. Where indicated, contributors have requested copyright protection. Permission to use copyright material must be obtained directly from each source so cited.

Governor

Joseph G. Anastasi
Secretary

December 29, 1975

The Honorable Marvin Mandel
Governor of Maryland
State House
Annapolis, Maryland 21404

Dear Governor Mandel:

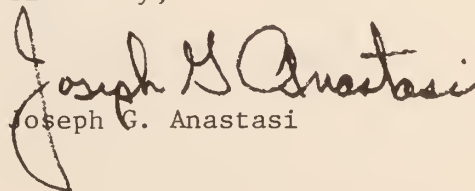

I am pleased to transmit to you the "1975 Maryland Statistical Abstract", which was prepared and published by the Department as part of its continuing effort to maintain, on as current a basis as feasible, a data base on which sound decisions affecting the welfare of our citizens can be made by government and private enterprise.

We update this publication every two years, thus providing a statistical record of the composition, changes and trends in population, incomes and employment in business and industry, governmental receipts and expenditures, agriculture, natural resources, and many other aspects of life in Maryland. Hopefully, State and local government agencies, individuals, and business firms will find the data useful to them.

We believe this edition to be the most complete compendium of State data yet produced in Maryland. In updating and expanding the coverage of the last Statistical Abstract, we have included valuable data from the Economic and Social Atlas of Maryland and the Supplement thereto. Also, in the Appendix to this volume, we have reproduced a number of historical time series, by month, of significant economic indicators.

Great care has been taken to insure the usefulness and accuracy of this publication. As with previous editions, this report has benefited from suggestions and comments from interested users. We anticipate a continuation of such support in the future.

Sincerely,

Joseph G. Anastasi

TABLE OF CONTENTS

	Page
POLITICAL SUBDIVISION MAP OF MARYLAND	1
Table No.	
1 Geographical Regions of Maryland Grouped by Political Subdivisions	2
POPULATION AND VITAL STATISTICS	3
2 Population, State of Maryland and Political Subdivisions, Rank by 1975: 1975 and 1970	5
3 Population of the 50 States and the District of Columbia Rank by Per Cent of Change: 1974 and 1970	6

POPULATION AND VITAL STATISTICS

The population of Maryland is estimated to have grown by nearly six per cent since 1970, according to data furnished by the Maryland Department of Health and Mental Hygiene.

State estimates are available for all fifty states on a consistent basis for the period ending July 1, 1974 (a year earlier than the Maryland data). Using those estimates we find that the 4.4 per cent increase in Maryland's population from 1970 to that date is slightly above the percentage increase of 4.0 per cent nationally.

As might be expected in an area as diverse as Maryland, there is considerable variance of growth among the political subdivisions of the State. Howard County was the fastest growing subdivision with a 55.4 per cent increase in population over the period from April 1, 1970 to July 1, 1975. Next were Charles (26.7 per cent), Calvert (24.3 per cent), Carroll (16.4 per cent), and Harford (13.8 per cent) Counties. At the opposite extreme were Somerset (-0.7 per cent), Dorchester (-1.7 per cent), and Allegany (-2.0 per cent) Counties. Concurrently, Baltimore City showed the largest loss in population, with a drop of 8.1 per cent indicated.

Consistent with national growth patterns, the population shifts have been urban in nature. The greatest increases are to be found in metropolitan Baltimore, with the exception of Baltimore City, and suburban metropolitan Washington. As is readily seen, with the exception of Baltimore City itself, the political subdivisions with below average growth are predominantly rural in their characteristics. Approximately 84 per cent of Marylanders reside in the Baltimore and Washington metropolitan areas, with the greater growth coming from Howard and Charles Counties.

More detailed demographic aspects are available as of this writing.

Baltimore City contains by far the greatest concentration of non-white citizens in the State. Of the 796,300 non-white Marylanders, 436,120 or 54.8 per cent reside in that jurisdiction. The overall percentage of non-white persons in the State is 19.7 while in Baltimore City, 49.5 per cent of the population is non-white.

The birth rate of the general population in Maryland followed the declining national trend. All political subdivisions shared in this decline. The State's birth rate in 1972 was 14.4 per thousand population; with the white birth rate standing at 13.3 and the non-white at 18.9. At the same time, the death rate here was 8.2 per thousand, with the white death rate at that level and the non-white at 8.3.

There were 49,924 marriages in Maryland during 1972. 11,520 divorces and annulments were granted during that year, with more than half being decreed on the grounds of voluntary separation.

EDUCATION

Education has been standing in the spotlight of publicity throughout the Seventies. Nearly 900,000 people were enrolled in public schools throughout Maryland in 1974. Following the national trend, elementary school enrollment has been declining due to decreases in the population of persons of elementary school age. Despite the decreases in births, nursery school attendance has been climbing. While most formal education takes place in the public school environment, approximately three-fourths of nursery school enrollment is in private schools.

On a statewide basis, the cost per pupil has risen to \$1,117, and the number of pupils per teacher and administrator has declined to 19.8.

Public high schools in Maryland graduated more than 54,000 students in 1974, a figure more than 21 per cent higher than the one recorded five years earlier. And, 42 per cent of these graduates continued into higher education.

Nearly 26,000 full time students were enrolled for the Fall 1974 term in the 19 two year colleges here. If one includes part time students, the figure rises to more than 66,000. The 34 four year colleges and universities compiled a full time undergraduate enrollment in excess of 68,000 students. Added to this figure are the more than 25,000 part time students and the 26,000 graduate students, bringing the total to over 186,000 students enrolled in institutions of higher education in Maryland.

HEALTH SERVICES

During the 1974 Fiscal Year Maryland's hospitals for the mentally ill treated over 20,600 patients, an increase of some 10 per cent over the number of patients treated roughly a decade ago. About 18,700 patients were treated at these facilities during fiscal 1963. However, due to shortened periods of hospitalization of new admissions and the gradual continuing decrease in the number of long term patients, the average daily size of the patient population declined 34.9 per cent during this time period, from 8,218 to 5,352.

It is generally believed that the rate of occurrence of most mental illnesses has not changed appreciably and that these expanding figures reflect the growing acceptance and usage of psychiatric hospitals and clinics for the short term intensive treatment of alcoholism and acute psychoneurotic and personality disturbances.

This section of the Abstract is expanded from earlier editions to include general health care as well as mental health care. Overall there were more than 24,500 hospital beds in the State as of May 31, 1975, and there were nearly 22,800 additional beds in other types of health care facilities here. And, according to the most recent data available (1972), there were, on a State-wide average, 754 Marylanders per physician providing direct patient care. As one might expect, there is considerable variation among the political subdivisions of the State.

CLIMATE OF MARYLAND

Maryland lies in the region midway between the rigorous climates of the North and the mild climates of the South. Since it is located in the middle latitudes where the general atmospheric flow is from West to East across North America, it has a continental type of climate with its marked temperature contrast between summer and winter; however, two important bodies of water, the Chesapeake Bay and the Atlantic Ocean have an important modifying control on the climate, especially by moderating extreme temperatures of adjacent areas.

The average annual temperature ranges from 48° F in the Garrett County area to 58° F in the lower Chesapeake Bay area. The highest temperature on record is 109° recorded at several places in Allegany and Frederick Counties while the lowest is -40° F at Oakland, Garrett County. Based on the 1931 - 1960 period, the average annual precipitation ranges from as much as 46 to 49 inches at opposite ends of the State, Allegany Plateau and Southern Eastern Shore, to as little as 36 inches in the Cumberland area located in the "rain shadow" just to the east of the Allegany Plateau. Elsewhere over the State, the annual precipitation ranges monthly between 40 to 44 inches. Monthly distribution is quite uniform, averaging between 2 and 4 inches each month and reaching a maximum between 4 and 5 1/2 inches in July or August. Annual snowfall ranges from a minimum of 8 to 10 inches along the coastal areas of southern Eastern Shore to a maximum of near 100 inches in parts of Garrett County.

Prevailing winds are mostly from the west-northwest to northwest except during the months of May through September when they become more southerly. Damaging or dangerous storms, such as tornadoes, hurricanes, and blizzards, are infrequent.

The climate of Maryland is a dependable natural resource which provides an excellent setting for the agricultural, industrial, commercial and recreational activities of its citizens.

Included within this section is a rather detailed table showing cloud cover conditions in Maryland. It is indeed interesting to note the variations in the amount of cloud cover from region to region. These conditions determine the feasibility of many horticultural projects.

NATURAL RESOURCES

Maryland's 2,882,000 acres of forest land represent nearly 47 per cent of the total land area of the State. As one might expect, however, there is considerable variance among the political subdivisions. The vast majority of commercial forest land is held in private lands (approximately 93.4 per cent) while public ownership accounts for the remainder.

Over 80 per cent of the timber in Maryland is of the hardwood varieties, and an estimated 188.6 million board feet of lumber were cut during the fiscal year ended June 30, 1973. Forest fires are always a threat, and in the 1974 fiscal year, 823 such blazes burned a total area of 2,327 acres. All counties suffered from these fires, and the causes were primarily carelessness in nature.

Nearly \$132 million worth of minerals were extracted during 1973. The leading commodity once again was stone, accounting for 35 per cent of the total. Sand and gravel were next as these items accounted for another 22 per cent of the value extracted. With the exceptions of Baltimore City and Queen Anne's County, all of the political subdivisions shared in mineral production. Major producing areas were Baltimore, Frederick, Prince George's, Garrett, and Carroll Counties.

Maryland touches both the Atlantic Ocean and the Chesapeake Bay. Seafood, therefore, becomes a vital resource. As impressive as the data reported herein appears to be, the user must be cautioned that there is a substantial undercount, what with the large number of sport fishermen active in our waters.

Data indicate a Maryland catch in 1973 with a dockside value of nearly \$24 million. The major share of this catch is credited to shellfish which account for more than \$21 million of the total. Oysters led that year (nearly \$13.6 million), crabs (approximately \$3.5 million), and clams (more than \$1.7 million). Leading finfish catches by value were striped bass (rockfish), and menhaden.

LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

More than 1.7 million Maryland residents were employed in 1974 as both the civilian labor force and the working members of that labor force continued to grow. On an annual average basis, the unemployment rate in Maryland was 4.7 per cent for 1974, although there was a great variation among the political subdivisions of the State.

The non-manufacturing sector of employment was again the growth leader, with larger gains being reported in trade, government and services employment. In fact, all major areas of employment showed gains between 1972 and 1974, with the exceptions of non-durable goods manufacturing and mining.

The role of federal government civilian employment in Maryland should not be overlooked. More than 130,000 Marylanders were employed by various federal agencies at the end of 1974, and this figure places Maryland fifth among all of the jurisdictions of the Nation in terms of resident population in relation to federal employment. An additional 54,000 civilian and military employees work for the Department of Defense.

Included in this section are tables showing commutation patterns of workers. Both interstate and intrastate destinations are shown. It is interesting to note that nearly 40 per cent of our labor force works outside its subdivision of residence.

Labor relations have continued good in Maryland. In conformity with historical trends, the per cent of estimated work time lost by stoppages in Maryland was again far lower than corresponding national figures.

MANUFACTURING EMPLOYMENT AND PAYROLLS

While the primary cause of economic growth has been in the non-manufacturing sector, certainly manufacturing represents a major factor in Maryland's economy, with almost 18 per cent of the non-agricultural wage and salary employment. Annual average employment in manufacturing was 255,400 employees in 1974, or approximately 14.9 per cent of the total employment in Maryland.

Despite a declining manufacturing employment level, payrolls increased significantly in the period from 1970 to 1973. Manufacturing payrolls increased by 16.1 per cent during this period, a figure attributable primarily to wage and salary increases. The largest manufacturing payrolls in Maryland during 1974 were in the primary metals industries, transportation equipment, and food and kindred products.

Average weekly earnings for all manufacturing in the State rose 35.2 per cent during the five year time period, from \$136.34 to \$184.34, with average hourly earnings rising over 35 per cent from \$3.40 to \$4.62.

Value added⁽¹⁾ figures for 1972 were led by the food and kindred products, primary metals, electrical machinery, transportation equipment and chemicals and allied products industries. While ranking somewhat below certain other mid eastern states in value added, Maryland experienced a percentage growth of more than 24 per cent over the 1967 to 1972 time period.

Historically, Baltimore City has been the dominant location for manufacturing firms in Maryland. In 1974 that political subdivision had virtually 40 per cent of the firms in the State. Next in order, in terms of number of firms, but far behind, are Baltimore (254), Montgomery (188), Prince George's (183), Anne Arundel (101), and Washington (95) Counties.

(1) The difference between the value of goods and the cost of materials or supplies that are used in producing them. Value Added is derived by subtracting the cost of raw materials, parts, supplies, fuel, goods purchased for resale, electric energy, and contract work from the value of shipments.

TRADE

Trade activity encompasses retail trade, wholesale trade, and selected services. Figures developed by the United States Bureau of the Census in its business censuses are quite interesting.

More than 31,000 retail establishments were situated in Maryland in 1972, and their aggregate sales were approximately \$9.5 billion. These figures represent a 25.3 per cent increase in the number of establishments and a 63.3 per cent increase in dollar volume from the data reported five years earlier. Eating and drinking places, food stores, and gasoline service stations were the more frequently reported types of establishments of those categorized, while food stores, automotive dealers, and general merchandise group stores reported the higher dollar volumes.

The number of wholesale trade establishments grew by more than 20 per cent over the same period, and a 71.4 per cent dollar volume increase was shown. Establishments dealing in machinery, groceries, and motor vehicles and automotive equipment were the more frequently reported, and dollar volume rankings showed motor vehicle and automotive equipment, groceries, and machinery establishments leading the list.

The reader is cautioned to read the note on page 135 before comparing the data concerning selected service industries activity reported for earlier years. Nearly 64 per cent more in terms of numbers of establishments were reported in 1972 than in 1967, and their receipts were up nearly 96 per cent over the period.

NOTE CONCERNING COMPARABILITY OF
THE 1967 AND 1972 CENSUSES OF SELECTED SERVICE
INDUSTRIES*

The 1967 and 1972 censuses were conducted under similar conditions and procedures. However, strict comparability of the data for the two censuses is limited. In both 1967 and 1972, classifications were based on the Standard Industrial Classification (SIC) Manual; however, there were major revisions to the SIC structure in 1972 which limit the comparability of data between these two censuses. It was not possible to retabulate 1967 data based on the revised 1972 classifications for comparative purposes, since in many cases the necessary information was not available for assigning the new 1972 classifications to the 1967 records. In the following tables which deal with the Maryland Selected Services Industries, data for the State as a whole are presented for both 1972 and 1967 based on the 1967 classifications. However, tables presenting 1972 data by political subdivision are not comparable with the 1967 breakdowns by political subdivision.

*Abbreviated note from the Bureau of the Census, 1972 Census of Selected Services Industries, Maryland, SC 72-A-21, Appendix A, page A2.

PERSONAL INCOME

Maryland's personal income rose in 1974 to \$24,077,000,000, an increase of nearly 44 per cent from 1970. The total personal income of the State represents 2.1 per cent of the total personal income of the United States, the same as the 2.1 per cent in 1970.

Per capita income in Maryland rose to \$5,881 in 1974, up more than 38 per cent from 1970. This figure placed the State twelfth in the nation in this category.

In average per household effective buying income in 1974, Maryland ranked second among the mideast states with a level of \$15,268. As might be expected, the metropolitan areas were the leaders, with suburban Washington's Montgomery County having the highest average disposable income of any county in the United States. Baltimore, Anne Arundel, Howard, Prince George's and Charles Counties each have disposable income figures in excess of \$15,000 per household, while at the other end of the scale, Garrett, Somerset, Worcester, Caroline, Allegany and Dorchester Counties all have levels of approximately \$10,000 or less.

The Gross State Product for Maryland is estimated to have risen in current dollars, to \$27.6 billion, an increase of 45 per cent above the level of 1970. The Gross State Product concept is roughly equivalent to the national level Gross National Product, i.e., the State output of goods and services valued at market price.

Note on the Poverty Level:

The poverty level is a designation used by the federal government as one means of identifying areas and persons with income levels so low that some economic hardship is likely to be present. Various levels have been determined depending on family size, sex of family head, number of children and type of residence. The poverty level threshold averages about \$3,750 on a national basis. The data for families below the poverty level have several limitations--for instance the poverty levels are not adjusted for state or local variation in costs of living, but are satisfactory for giving a general picture of the existence and location of low income.

CITY WORKER'S FAMILY BUDGET

The city worker's family budget refers to the annual cost of a moderate living standard for a family comprised of a 38-year-old husband, a wife not employed full time outside the home, a 13-year-old boy, and an 8-year-old girl. This is the model family devised by the Bureau of Labor Statistics, U.S. Department of Labor.

In 1974 the average urban worker's budget was \$14,333, while the Baltimore budget was \$14,398. The Washington budget at the same time was \$15,035. Using 30 metropolitan areas to equal 100, the Baltimore area had an index of 100 while the Washington area index was 105. As will be noted in accompanying tables, average earnings differ considerably as between occupational groups when using the metropolitan areas base.

STATE FINANCE

Maryland's fiscal 1974 State expenditures totaled \$2,576,542,000. Of this total 30.2 per cent went to education, 14.8 per cent to highways and transportation, and 15.1 per cent to public health, hospitals, and mental hygiene, with 8.8 per cent going to public assistance programs.

During the same fiscal year the State received \$2,505,066,000 with 26.4 per cent of that total coming from income tax sources, 14.6 per cent from retail sales and use taxes, 6.9 per cent from motor fuels taxes, 5.7 per cent from motor vehicle user taxes, fines and licenses, 19.4 per cent from federal funds, and 6.5 per cent from bond issues.

Net cash expenditures have increased nearly 137 per cent from fiscal year 1968 to fiscal year 1974 while net cash receipts have increased more than 135 per cent over the same time period. As might be expected, the fiscal 1974 growth is quite large in both categories, with net cash expenditures almost 10 per cent above the year-earlier figure and the net cash receipts standing more than 7 per cent above the prior year.

FINANCIAL INSTITUTIONS

The number of active banks of all types in Maryland decreased from 117 to a total of 116, between 1971 and 1973. Mergers of smaller banks into larger institutions are primarily responsible for this decrease. Total assets or liabilities increased during the period by 27.1 per cent. No change occurred in national banks vis-a-vis state chartered banks. While the number of national banks remained the same, their total assets or liabilities rose 30.7 per cent.

Over the same time period the number of industrial finance companies decreased by 1.5 per cent (325 to 320), and their total assets or liabilities and capital rose 30.4 per cent to an amount in excess of \$448 million. Meanwhile credit unions remained at 37 in number. Total assets or liabilities of the credit unions in 1973 stood at \$97 million, an increase of 29.9 per cent since 1971.

The number of building, savings, and loan associations in Maryland decreased from 239 at the end of 1972 to 233 a year later. Of those associations active at the end of 1973, 80 were either federally chartered or were State chartered with federal insurance, and 153 were State chartered with Maryland Savings Share Insurance Corporation insurance.

More than \$4,500,000,000 in mortgage loans were outstanding as of December 31, 1973 by the associations in Maryland, a 13.7 per cent increase from the year prior. Similarly, total assets increased to over \$5,196,000,000 representing an 11.6 per cent increase.

LIFE INSURANCE

The strength of the Maryland economy is again evident in the field of life insurance. Nearly \$3,225,000,000 of ordinary life insurance was purchased in Maryland during 1973. This figure represents a 15 per cent increase from the prior year and a 97.2 per cent increase since 1967.

When all types of life insurance are considered, Marylanders held more than 7,800,000 policies with an in force valuation in excess of thirty-nine billion dollars. The average amount in force per family in Maryland stood at \$26,800 during 1974, representing an increase of 15.5 per cent since 1972. Maryland's average is therefore somewhat above the national family average of \$26,500 of life insurance in force.

NO. 141

LIFE INSURANCE IN FORCE IN MARYLAND: 1974

TYPE	NUMBER OF POLICIES (1,000)	AMOUNT (\$1,000,000)
Total	7,842	39,761
Ordinary	2,565	20,084
Group	1,625	16,657
Industrial	1,980	1,056
Credit	1,672	1,964

Average amount in force per family \$26,800 (15.5 per cent increase since 1972).

Note: "Credit" is now limited to life insurance on loans of ten years' or less duration. "Ordinary" and "Group" include credit life insurance on loans of more than ten years' duration.

(1) Includes group credit.

COURTS AND LAW ENFORCEMENT

This section deals with the Juvenile Facilities, adult correctional facilities, state trial courts (civil and criminal), and the federal trial court in Maryland (civil and criminal).

The juvenile facilities in Maryland are under the jurisdiction of the State Division of Juvenile Services, a constituent agency of the Department of Health and Mental Hygiene. In the twelve month period from July, 1974 through June, 1975 there were 57,237 juvenile court cases reported with the largest number coming from Baltimore City (20,691), followed by the metropolitan counties of Prince George's (9,320), Baltimore (6,835), Montgomery (5,292), and Anne Arundel (5,296). The average daily population in June 1974 of the six juvenile institutions in the State was 1,060. Comparable average population data available for June, 1975 show a 6.6 per cent increase to 1,130.

Adult correctional institutions in the State housed an average daily population of 5,893 inmates in fiscal 1974. The average annual per capita cost per inmate was \$5,003. More inmates were committed from Baltimore City (2,644) during fiscal 1974 than were committed from the combined counties (1,609). These statistics, of course, deal with the statewide correctional institutions, and local facilities are not included. The institutions covered in this publication are the Maryland House of Correction, Maryland Penitentiary, Maryland Correctional Institution-Hagerstown, Maryland Correctional Institution for Women-Jessup, and the Receiving Centers for Males and Females.

As of August, 1974, there were 80 trial judges in the state which is divided into eight judicial districts for administrative purposes. Each county has a minimum of one jurist, and Baltimore City has 21 trial judges. On the basis of population per judge, the range is from 16,700 per judge in

Kent County to 78,300 per judge in Carroll County. Though these extreme ranges are severe, a more moderate range will be noted generally by the reader of the table. On a statewide average, the population per judge is 51,367 with 649 civil cases and 307 criminal cases representing the trial load. During the year from July 1, 1973 through July 30, 1974 53,916 civil cases were filed in Maryland trial courts, an increase of 6.6 per cent over the prior year, and 52,054 civil cases were disposed of in the same period, a 6.7 per cent decrease in dispositions.

There was a 19.7 per cent increase in the filing of criminal cases, and a 42.8 per cent increase in dispositions in this area. As a consequence, therefore, when all cases (civil and criminal) filed in the trial courts of Maryland are considered for this period, there were 78,519 cases filed, an increase of 10.4 per cent, while there were 78,621 dispositions, representing a 5.7 per cent increase.

The United States District Court for the District of Maryland (coincident with the state boundaries) sits in Baltimore City. Relatively speaking its backlog remains in good condition. As of June 30, 1974 there were 1,320 civil cases and 391 criminal cases pending. In absolute terms 1,342 civil cases and 702 criminal cases were terminated during the fiscal year.

The bankruptcy backlog did increase somewhat over the same time frame, with 659 cases being commenced and 808 terminated. More than 3,463 passport applications were handled, and over 1,900 aliens were naturalized in the Court during the 1974 fiscal year.

SOCIAL SERVICES

Programs of the various local departments of social services are subject to the supervision, direction, and control of the Maryland Social Services Administration, a major agency within the Department of Employment and Social Services.

Generally speaking, the locally administered programs are public assistance, financial eligibility for medical assistance, child welfare services, and other services related to social planning. Funds for the various programs come from federal, State, and local sources, with percentage portions varying by the type of program.

In fiscal 1974 over \$232,000,000 was paid out to individuals and families, a decrease of 13.8 per cent over the preceding year and a 116.6 per cent increase since 1968. Almost 54 per cent of these payments were in the form of aid to families with dependent children. 47,279 total cases received financial assistance, a decrease of 22.1 per cent over fiscal 1973 and a 29.5 per cent increase since 1968.

ENERGY

As the days of cheap and apparently plentiful energy came to a rather abrupt end recently, public awareness of the problems rose dramatically. This expanded section replaces the "Utilities" section of earlier years.

Demand for natural gas energy grew by nearly 24 per cent from 1964 to 1974 in terms of the number of customers. But, in recent years the demand is really not shown in the traditional way as moratoria by the utility companies have forbidden new gas hookups. Conservation measures, higher prices, weather, and the national recession all combined over the period from 1972 to 1974 to reduce the quantity of natural gas consumed.

Total commercial and industrial electric sales rose nearly 100 per cent from 1965 to 1974, but there was a drop from 1973 to 1974. Virtually all of the installed generating capacity is privately owned.

Much of the public interest had been devoted to the motor vehicle gasoline situation. Data show an absolute reduction in the gallonage sold in Maryland and in the Nation during 1974. The average price for regular grade gasoline sold in the Baltimore metropolitan area rose from 40.9 cents in October 1973 to 61.5 cents in August 1975. Premium gasoline rose from 44.8 to 65.8 cents per gallon over the same period. Prices in this area were consistently higher than national averages.

The telephone continues to play an increasingly dominant role in communication. More than one and one-half million customers had more than 2.9 million telephones in the State. Continued expansion is promised what with the growing usage of the telephone for data processing and consumer services.

THE PORT OF BALTIMORE

The Port of Baltimore ranks as the fourth largest foreign trade port in the United States. In 1974, 40,986,601 short tons of cargo valuing over \$7.1 billion were handled, an increase in tonnage of more than eighteen per cent over the corresponding figure for 1973. Approximately 69 per cent of this tonnage was in import commerce, amounting in value to over \$3.6 billion.

Although the export tonnage represents only 31 per cent of the total tonnage, its value is nearly 50 per cent of the total value. This fact is due to the more sophisticated nature of the manufactured devices primarily in export as opposed to the bulk commodities and raw materials being imported.

In terms of import tonnage the principal countries of lading on foreign commerce are Venezuela, Brazil, Canada, and the Netherlands Antilles, but, in value West Germany, Japan, Venezuela, and the United Kingdom lead, in that order. Broken into trade areas, Europe has a clear lead in value while in tonnage the South American countries are our principal traders.

The use of containerization is growing markedly, and within the port, facilities built for this purpose are being used more readily. The Maryland Port Administration is presently constructing additional public container facilities at Locust Point to supplement existing container facilities at the recently expanded Dundalk Marine Terminal and the Canton facility. In addition, private enterprise has already dedicated a major container facility in the Baltimore Port. Gantry and giant bridge cranes serve these facilities. The response of shippers to the Port's containerization programs has been quite impressive and a tribute to the facilities.

AIR TRAVEL

Baltimore-Washington International Airport serves as the major commercial air facility in the State. This operation is owned by the State of Maryland, and it is operated by the Maryland Department of Transportation.

During 1974, nearly 2.8 million passengers were handled on more than 220,000 air traffic operations. Freight traffic totalled almost 82 million pounds, and significant volumes of express and mail were loaded and unloaded at the facility. While the data indicate a decline from comparable data for 1970, they indicate a picture closely akin to the one of 1972, especially insofar as passengers are concerned.

Worthy of mention are the facts that an expansion program is currently underway for both passenger and freight operations at the facility. Also, plans are underway as of this writing for the construction of a train station along the Amtrak mainline just one and one-half miles from BWI, with the station to be used for boarding and disembarking passengers to and from Baltimore, Washington, and other points in the corridor.

In addition to BWI, a listing of airports and heliports in Maryland shows 39 other facilities, spread out among 23 of the State's 24 political subdivisions. Scheduled operations serve several of these locations.

MOTOR VEHICLES

Motor vehicles play a major role in the Maryland economy. In addition to traffic volume and highway utilization rates, the manufacture, distribution, maintenance, and commercial use of motor vehicles in the State represent a major economic force.

There were 2,320,774 motor vehicles registered in our State during the 1975 registration year. Some 2,358,860 persons held licenses to operate vehicles as of January 1, 1975.

There are 24,933 miles of highway in the State, half of which is in the metropolitan Baltimore and the metropolitan Washington areas. Interstate highways comprise more than 329 miles of these totals. Traffic recorders located at 39 points in the State for 1974 reflect the decrease in travel resulting from the gasoline crisis. The total of all toll facilities showed a decrease of 4.4 per cent from 1973; traffic on J.F. Kennedy Highway (I-95) in 1974 was 9 per cent lower than the total for the previous year.

Motor vehicle user taxes, license, fines, and costs amounted to over \$315,074,000 in fiscal 1974, up \$2,785,000 from the fiscal 1973 figure. The 1974 amount represents 12.6 per cent of the total State revenue for the fiscal year.

AGRICULTURE

Maryland, like most other states of the United States, and especially the "megapolitan" states, has been undergoing a shift from rural agricultural living and employment to urban manufacturing and service employment.

Accordingly, the land devoted to farming and the number of farms has been steadily declining. In the period from 1968 to 1975, the land in farms has declined from 3,200,000 acres to 2,940,000 acres while the number of farms in the State has declined from 19,700 to 17,600. A natural corollary here has been the decline in farm workers to an annual average of 31,000 in 1972, including family and hired workers.

The largest sources of farm income are livestock and livestock products, which, in 1974, accounted for 59.2 per cent of the value of all agricultural commodities in Maryland. The dominance of this category is due primarily to dairy products and poultry. Cattle and calves, eggs, and hogs are important, but they represent substantially smaller elements. In the same year field crops accounted for approximately 32 per cent of the receipts for all commodities, led by corn, soy beans, and tobacco. At the same time vegetables and melons, as well as greenhouse and nursery products were important sources of farm income in the State.

Prices received by farmers have improved quite substantially in the period from 1969 to 1974. Using a base period of 1947-1956 to equal 100, the index number for all commodities rose from 103 in 1969 to 157.0 in 1974. Likewise the all crops index rose over the same time period from 109.0 to 193.0 while an index based on livestock and livestock products went from 100.0 to 174.0.

HOUSING AND CONSTRUCTION

Traditionally, home ownership has been a goal for most Marylanders. Virtually 59 per cent of the housing units in the State were owner occupied at the time of taking of the most recent Census of Housing. The variations in percentages of owner occupancy ranged from 71.8 per cent in Howard County to 42.2 per cent in Baltimore City.

Overall, the quality of housing is rather good when one looks at the generally cited characteristics. Again, there is considerable variance among the political subdivisions.

The total construction contract values ratio of Maryland to the Nation stood at 2.2 in 1974. Speaking in absolute dollars, nearly \$2.1 billion of construction contract awards were made in the State during that year. Almost \$600 million of the value was for residential construction contracts while more than \$705.2 million represented awards for non-residential buildings. Non-building construction accounted for the remaining \$753.7 million.

There were 23,073 new building permits issued in Maryland for residential dwelling units of all types. In terms both of these numbers and of the values mentioned above, it was this sector of construction that was the hardest hit by the recent national recession.

Although Maryland is not a major mobile home market, there is a small but steady demand for this type of housing. From 1960 through 1974, 30,048 new mobile homes were shipped into the State.

SELECTED CHARACTERISTICS OF HOUSING IN MARYLAND, BY POLITICAL
SUBDIVISION: 1970

SUBDIVISION	QUALITY OF HOUSING 1970	DENSITY OF OCCUPANCY 1970	HOME OWNERSHIP 1970	RECENTLY BUILT HOUSING

REAL ESTATE

The total assessed value of real property in Maryland in 1974 stood at \$18,062,714,000, representing an increase of 23 per cent over the corresponding aggregate assessment in 1972. The greater valuation occurs in Montgomery, Prince George's and Baltimore Counties, and in Baltimore City, in that descending rank.

Strides have been made among the local jurisdictions to achieve uniformity in assessment level ratios, and all assessors in the State are now employees of the Maryland Department of Assessments and Taxation. The Statewide average in 1974 was 44.6 per cent, a ratio apparently lower than those shown in earlier years. But, this reduction in level is due to the change in the inflation factor used in the determination of assessments.

The federal government owns and leases substantial acreage and buildings in the State. The size of the federal operation is due, at least in part, to the proximity of Maryland to the District of Columbia.

As of June 30, 1974, the federal government owned more than 191,000 acres of land and nearly 12,000 buildings on Maryland land. And, as of June 30, 1973, nearly 2,850 acres and more than 1,020 buildings were leased to the federal establishment. Increases in both ownership and leasehold interests have occurred substantially in recent years.

FEDERAL OUTLAYS IN MARYLAND

While Maryland ranks forty-second among the states in area and seventeenth in population, it ranks fourteenth in total federal funds received.

Of the nearly \$6.8 billion in 1972 outlays in Maryland, more than \$1.5 billion were in Baltimore City and Montgomery County, while Prince George's County received over one billion dollars and Baltimore County some \$786 million.

From the myriad of federal programs, outlays in the retirement and disability programs were nearly \$1.5 billion, defense outlays were over \$2.0 billion and it is thus seen that these many federal programs constitute a major impact on the Maryland economy.

ELECTIONS

Maryland is often referred to as a barometer of national voting patterns. In 1972, the voters of the State cast their ballots for President, giving Richard Nixon 61.3 per cent of the popular vote, while nationally the Republican candidate polled 60.7 per cent of the popular vote. In fact since 1932, Maryland has voted against the winning presidential nominee only twice, and these were extremely close ballots.

There were nearly 1,738,000 registered voters in Maryland for the 1974 general election. 69.8 per cent of these registrants were listed as Democrats, 25.7 per cent as Republicans, 4.4 per cent declined to give a party preference, and .1 per cent listed themselves as members of the American Party.

Marvin Mandel was reelected Governor of Maryland in 1974 as he polled 63.5 per cent of the popular vote, carrying 18 of the 24 political subdivisions of the State. At the same time the rather independent pattern of voting in Maryland asserted itself as Senator Charles McC. Mathias, Jr., a Republican, was re-elected to the United States Senate, carrying a popular vote of 57.3 per cent and 22 of the 24 political subdivisions.

Comptroller Louis L. Goldstein and Attorney General Francis B. Burch, both Democrats, were reelected as part of the Democratic Party ticket in 1974, and the Maryland Legislature is presently composed of 165 Democrats and 23 Republicans.

The Congressional delegation of Maryland is composed of two Republican Senators, five Democratic and three Republican members of the House of Representatives.

NO. 214

MARYLAND GENERAL ELECTION RETURNS - NOVEMBER 5, 1974
FOR UNITED STATES SENATOR (Cont'd.)

SUBDIVISION	DEMOCRATIC PARTY		REPUBLICAN PARTY	
	BARBARA A. MIKULSKI	% TOTAL	CHARLES McC. MATHIAS, JR.	% TOTAL
		SUBDIVISION		SUBDIVISION
Talbot	2,110	36.0	3,744	64.0
Washington	5,837	25.9	16,690	74.1
Wicomico	4,206	36.4	7,353	63.6
Worcester	1,829	37.5	3,046	62.5

Source: State Administrative Board of Election Laws.

RECREATION AREAS

The use of recreational land in Maryland is rather substantial. More than five per cent of the land area of the State is classified as recreation or open space land. As might be expected, there is considerable variation among the political subdivisions, with Garrett (18.6 per cent) and Allegany (16.1 per cent) Counties having the greater figures.

It was estimated, using data from the 1970 Census of Population and Housing, that 1.8 per cent of the State's housing stock is comprised of recreation homes. Worcester County has the highest proportion in the State, followed by Calvert and Garrett Counties. Once again the variety of our natural resources is highlighted by this geographical dispersion of recreational activities from the ocean to the mountains.

RECREATION HOMES, BY POLITICAL SUBDIVISIONS: 1970

POLITICAL SUBDIVISION	PER CENT OF RECREATION HOMES (ESTIMATED)
Allegany	1.00
Anne Arundel	4.23
Baltimore	0.70
Baltimore City	0.51
Calvert	17.49
Caroline	2.02
Carroll	0.36
Cecil	8.96
Charles	3.08
Dorchester	3.62
Frederick	1.66
Garrett	14.76
Harford	0.46
Howard	0.80
Kent	7.57
Montgomery	0.33
Prince George's	0.21
Queen Anne's	6.87
St. Mary's	5.88
Somerset	4.76
Talbot	3.88
Washington	1.52
Wicomico	1.33
Worcester	36.45
MARYLAND	1.81

Note: The number of recreation homes is estimated as the sum of the enumerated seasonally vacant and migratory housing units and 30 per cent of year-round "other vacant" housing units. Thirty per cent is the percentage for the state that year-round housing units held for occasional use are as a proportion of all year-round other vacant housing units. The other portion of this total of vacant year-round housing consists of housing open for rental occupancy or for sale.

STATISTICAL APPENDIX

NOTES TO STATISTICAL APPENDIX

This Appendix to the 1975 Maryland Statistical Abstract is divided into two parts. First is a table of selected demographic characteristics for Maryland, and it is hoped that this table will be useful to the reader who wants to glean a profile of our State.

Following this table is a series of tables which we anticipate to be of great utility to many users. Historical time series of many important economic indicators are shown by month, both unadjusted, and, then adjusted for seasonal variations. Many requests for such data are received, and it is hoped that this ready reference will format the material as that maximum benefit may be derived.

*This table was chosen as a new approach to provide general information on demographic characteristics of the nation as a whole which relate in a general way to criteria used to determine distribution of federal monies.

(1) All rankings and percentages except for federal outlays are based on data from "Statistical Abstract of the United States 1973" with the exceptions of "Tax Effort" and "per Capita Income" which were obtained from "Final Data Elements Entitlement Period 4" of the revenue sharing formula.

(2) Data not included.

(3) Less than .05 per cent.

Note: The number of a state's rank may exceed 50 because the rankings were made from a list containing the 50 States, the District of Columbia and 9 Territories.

Per cents may not add due to rounding.
